

QuantCAD Commercial Offer

QuantCAD Hybrid Industrial 2.3.12 | Offline Desktop Edition

Date: 12.09.2026 | Valid until: 12.10.2026

We propose a solution for preparing quotations for machined parts. QuantCAD combines STEP model visualization, raw stock calculation, and cost structure in a local workflow that can be adapted to your workshop rates and rules.

Licensing Options

License	Total Price excl. VAT	Right of Use
1 year	1,500 EUR	12 months from activation
3 years	4,000 EUR	36 months from activation
Permanent	4,500 EUR	No expiry for the purchased version
Annual maintenance	500 EUR / workstation / year	Maintenance service; billed separately

Prices are for one license on one authorized Windows computer. All license variants include the same set of functions described in this offer. Annual maintenance is priced separately at 500 EUR per licensed workstation/year.

The Right Choice for Your Company

The 1-year license allows you to introduce the solution with a lower initial investment and evaluate its usefulness in your own quotation workflow.

The 3-year license is intended for recurring use: it saves 500 EUR, approximately 11.11%, compared with three annual licenses at the price stated in this offer. The equivalent cost is 1,333.33 EUR per year; payment is made for the entire period.

The permanent license removes the need to renew the right of use for the purchased version. It is suitable for long-term use; it does not automatically include future major versions or unlimited maintenance. Annual maintenance is 500 EUR per licensed workstation/year.

Permanent License Package for a Minimum of 3 Workstations

3 workstations: 12,000 EUR total, excl. VAT. The price is 4,000 EUR/workstation, with a total saving of 1,500 EUR (11.11%) compared with three individual permanent licenses at 4,500 EUR/workstation.

4 or more workstations: 4,000 EUR/workstation, excl. VAT. The total is calculated by multiplying the number of workstations by the unit price. Examples: 4 workstations = 16,000 EUR; 5 workstations = 20,000 EUR.

The volume rate applies to a single order of at least 3 licenses for the same company. Annual maintenance for permanent multi-workstation licenses is 500 EUR per licensed workstation/year, excl. VAT. Additional workstations ordered later are quoted separately.

Included Functions and Practical Benefits

Quotation and 3D model in the same workflow. STEP import and Setup View allow part visualization. Search opens an independent window with locally available information, quotation data, and the model, so the user can verify everything before sending the price.

Detailed costs per part and per batch. Material, programming, setup, cycle time, machine and operator rates, energy, tools, consumables, and external operations can be included together with inspection, scrap, overhead, and the configured margin. The calculation assumptions remain available to the user.

Raw stock calculated according to workshop rules. Ranges and allowances for length, width, and thickness can be edited and saved locally. Updating dimensions is reflected in weight and material cost, reducing repetitive data entry.

Adaptable rates and materials. The local catalog and material prices, machine rates, and energy costs can be adjusted. A change in input data can be reflected in the estimate without manually rebuilding the entire quotation sheet.

Offline operation. The quotation and visualization workflow described here does not require mandatory access to an online platform. The data and rules used are stored locally. The license type and expiry are visible in the application.

Commercial Terms

The license is delivered electronically through an installer and activation for the authorized computer. The 1-year or 3-year period starts on activation; after expiry, continued use requires renewal. The permanent license does not expire for the purchased version.

The multi-workstation package allows simultaneous use on the licensed computers, with separate activation for each workstation. It includes the same functions as the individual license; it does not include a floating license, shared database, or automatic synchronization between workstations.

Prices are stated in EUR, excluding VAT. Invoicing may be carried out in RON at the National Bank of Romania exchange rate applicable on the invoice date; VAT is applied according to the supplier's tax regime. Full payment is required before activation. Delivery time is confirmed with the order.

Training, data migration, guaranteed-response-time support, major updates, and development of custom functions are not included in the license prices above and are agreed separately in writing. Annual maintenance is available at 500 EUR per licensed workstation/year.

Scope of Use

QuantCAD assists with quotation preparation and visualization; it does not replace a complete CAD/CAM system and, under this offer, does not generate CNC programs. Times, costs, and machine selection must be technically validated based on the drawing, tolerances, material, fixturing, and the machine's actual capabilities. Online modules, email connectors, and external AI services are not included.

To place an order, please provide the selected license option and billing details. The computer configuration and compatibility with representative files are checked before activation.
